

BOAZ BLAKE

SOFTWARE ENGINEER | AI-ASSISTED ENGINEERING | TYPESCRIPT, NODE.JS, WEB & MOBILE

Houston, TX | (347) 420-3251 | boazblake@protonmail.com | github.com/boazblake | boazblake.github.io/identity

PROFESSIONAL SUMMARY

Software engineer with nearly 10 years of experience building, testing, debugging, and supporting enterprise web and mobile systems. Strong in TypeScript, JavaScript, Node.js, Vue, APIs, real-time systems, automated testing, production troubleshooting, and evaluating software behavior across system boundaries.

CORE SKILLS

Engineering: TypeScript, JavaScript, Node.js, Vue.js, NativeScript-Vue, AureliaJS, HTML, CSS, REST, GraphQL, WebSockets

Data & Backend: SQL, C#/.NET integration, Entity Framework request handlers, API design and integration

Quality & Delivery: Automated testing, CI/CD, GitHub Actions, Jenkins, code review, requirements validation, production debugging, technical documentation

PROFESSIONAL EXPERIENCE

Empyrean Benefit Solutions | Houston, TX | 2016 - Present

Senior Front End Web System Developer | Apr 2019 - Present

- Delivered a cross-platform AI conversational assistant in under four months using Vue and NativeScript-Vue, owning frontend architecture and partnering with a backend engineer on AI-agent orchestration, live-agent handoffs, internal API integration, WebSocket streaming, reconnection, and session recovery.
- Diagnose production failures across browsers, physical mobile devices, APIs, and real-time connections using structured logs, reproducible test cases, and system-boundary analysis.
- Develop TypeScript and Node.js services, integrate REST and GraphQL APIs, and contribute to C#/.NET Entity Framework request handlers and SQL-backed business workflows.
- Review code, mentor developers, document decisions, and work with product, design, business, and backend teams to validate requirements, assess tradeoffs, and deliver production software.
- Delivered a delayed-configuration capability ahead of schedule by owning SQL table design, API development, validation, and a complex frontend workflow.

Front End Web Developer | Aug 2016 - Apr 2019

- Worked directly with business users and analysts to understand legacy client-configuration workflows before rebuilding them, preventing known usability problems from carrying into the modern application.
- Redesigning a multi-page legacy .NET workflow as an Aurelia data table with expandable rows, reducing the typical path to record details from about four navigation clicks to one.
- Implemented supporting SQL schema changes, C#/.NET and Entity Framework request handlers, REST APIs, validation, and Aurelia frontend features; also delivered Vue and NativeScript applications including EmpyreanGO.

SELECTED PROJECTS

- Inner-Sanctum (Sanctum): private React Native voice journal using on-device Whisper transcription and local LLM reflection, with no backend, analytics, or network dependency.
- Lift-Mate: Ionic and Mithril fitness application with real-time MediaPipe pose, hand, and face landmark detection across web and native mobile.
- Golf-Pro: pose-AI data project that collects professional golf swing video, normalizes body coordinates, and prepares training data for real-time swing feedback.

EDUCATION & TECHNICAL TRAINING

The Iron Yard, Houston, TX | Front-End Web Development | 2016

University of Houston, Houston, TX | Doctoral Studies | 2011 - 2014 - Human space exploration research supported by NASA HRP Grant #NNX12AF04G; graduate teaching assistant for statistics and biomechanics.

James Madison University, Harrisonburg, VA | B.S. Sports Medicine, cum laude | 2010
